**MEDIKEEPER SELECTED AS A PHR APPLICATION PROVIDER BY DOSSIA**

**SAN DIEGO, Calif. and PORTLAND, Ore., December 12, 2008** – MediKeeper, a leading provider of software and technologies for patient and employee health, wellness, and adherence, has been selected as one of Dossia’s personal health record application providers. Dossia, a non-profit consisting of large U.S. employers, provides employees with access to, and control over their health information through personally-controlled health records (PCHRs).

As employers deploy Dossia’s personally-controlled health records, they can choose MediKeeper as an application for employees to view and manage their personal health information from multiple data sources. The software could be populated with patient data such as patient history, screenings, labs, medications and device data from Dossia’s existing technology platform.

Dossia enabled employees will subsequently have access to up-to-date health information through the MediKeeper application to make informed and preventative healthcare decisions. The MediKeeper application will enable this information to be conveniently shared with an employee’s healthcare provider, used to identify gaps in care or avoid medical errors, and made available in critical medical situations.

“MediKeeper is proud to meet the vigorous standards of Dossia and to be selected as one of its first personal health record application providers,” said Ryan Tarzy, President of MediKeeper. “Our organizations share mutual values of upholding privacy, portability, and patient-control. MediKeeper looks forward to working together with Dossia to break new ground in empowering employees through health and wellness information technologies.”

“Gaining access to health data is a difficult feat for consumers in today’s healthcare system. Dossia is dedicated to breaking down these barriers, and empowering employees to make smart health decisions,” said Rick Benoit, Director of Ecosystem Development at Dossia and Senior Program Manager at Intel. “We look forward to collaborating with innovative application providers like MediKeeper, who play an important part in this process and the development of the Dossia enabled ecosystem.”

Dossia’s infrastructure is open-source, and made available to personal health application developers, such as MediKeeper, who share a commitment to maintaining a consumer’s personal access to and control of

health information. The infrastructure is designed to encourage vendor innovation for the benefit of patients and providers nationwide.

#### **About MediKeeper**

MediKeeper is a private company delivering web-based Personal Health Applications (PHAs) and technologies for patient-centered health information management. MediKeeper offers employers and health care providers a robust and consumer-friendly package of customizable web-based tools and content to assist with their health and wellness programs, enhancing ROI while improve the health and quality of life for employees and patients.
